A method of testing a print driver in a computer system, comprising:
automatically generating a driver-test data structure with associated applications and documents; and

processing said driver-test data structure to open said associated applications and documents and thereby test said print driver.

- 1 2. The method of claim 1 further comprising:
- selecting one or more print options associated with said driver as selected print options, wherein said automatically generating generates said driver-test data structure with said associated applications and documents and said print options, and said processing said driver-test data structure includes opening said associated applications and documents; and
- 7 setting said selected print options.
- 1 3. The method of claim 1 further comprising:
- providing a graphical interface to associate said applications and documents.
- 1 4. The method of claim 3 further comprising:
- 2 including a spreadsheet in said graphical user interface to associate said applications and documents.
- 1 5. The method of claim 1 further comprising:
- 2 registering one or more of said applications.
- 1 6. The method of claim 1 wherein the computer system has a plurality of installed 2 print drivers, further comprising:
- automatically learning a plurality of print options of one of the plurality of
- 4 installed print drivers to provide learned-controls;
- selecting said one of said plurality of installed print drivers as a test-print driver;
- 6 and

providing a graphical user interface to set at least one of said plurality of print options to a predetermined value, wherein said automatically generating generates said driver-test data structure with said associated applications and documents, and includes said predetermined value of said at least one of said print options, and said processing said driver-test data structure to open said associated applications and documents includes setting said at least one of said plurality of print options to said predetermined value.

- 1 7. The method of claim 1 further comprising:
- 2 printing each of said documents.
- 1 8. The method of claim 1 further comprising:
- 2 generating alog while executing said test engine.
- 1 9. A computer program product for use in conjunction with a computer system, the
- 2 computer program product for testing a print driver in a computer system, the computer
- 3 program product comprising a computer readable storage medium and a computer
- 4 program mechanism embedded therein, the computer program mechanism comprising:
- instructions to automatically generate a driver-test data structure with associated
- 6 applications and documents; and
- 7 a test-engine to open said associated applications and documents of said driver-test
- 8 data structure to test said print driver.
- 1 10. The computer program product of claim 9 further comprising:
- 2 instructions to select one or more print options associated with said driver as
- 3 selected print options, wherein said instructions to automatically generate generates said
- 4 driver-test data structure with said associated applications and documents and said print
- 5 options, and said test-engine further includes instructions to open said associated
- 6 applications and documents with said selected print options.
- 1 11. The computer program product of claim 9, wherein the computer program
- 2 mechanism further comprises:

- instructions to provide a graphical interface to associate said applications and documents.
- 1 12. The computer program product of claim 9, wherein the computer program
- 2 mechanism further comprises:
- an edit known application procedure to register one or more of said applications.
- 1 13. The computer program product of claim 9, wherein said computer program 2 mechanism further comprises:
- an auto-learn procedure to automatically identify a plurality of print options of an installed print driver;
- 5 instructions to select said installed print driver as a test-print driver; and
- instructions to provide a graphical user interface to set at least one of said plurality
- 7 of print options to a predetermined value, wherein said instructions that automatically
- 8 generate generates said driver-test data structure with said associated applications and
- 9 documents, and include said predetermined value of said at least one of said plurality of
- 10 print options; and
- instructions to set said at least one of said plurality of print options to said
- 12 predetermined value, thereby testing said test-print driver.
 - 1 14. The computer program product of claim 9, wherein said computer program
- 2 mechanism further comprises:
- instructions to provide a spreadsheet to associate said applications and documents.
- 1 15. The computer program mechanism of claim 9, wherein said computer readable
- 2 program code means further comprises:
- instructions to print each of said documents.
- 1 16. The computer program product of claim 9, wherein said computer program
- 2 mechanism further comprises:
- instructions to generate a log while executing said test engine.

1	17. A computer system for testing a print driver, comprising:
2	memory to store:
3	instructions to automatically generate a driver-test data structure with
4	associated applications and documents; and
5	a test-engine to open said associated applications and documents of said
6	driver-test data structure to test said print driver; and
7	a processor to execute said instructions and aid test-engine stored in said memory.
1	18. The computer system of claim 17 wherein said memory further comprises:
2	instructions to select one or more print options associated with said driver as
3	selected print options, wherein said instructions to automatically generate generates said
4	driver-test data structure with said associated applications and documents and said print
5	options, and said test-engine further includes instructions to open said associated
6	applications and documents with said selected print options.
1	19. The computer system of claim 17 wherein said memory further comprises:
2	instructions to provide a graphical interface to associate said applications and
3	documents.
1	20. The computer system of claim 17 wherein said memory further comprises:
2	an edit known application procedure to register one or more of said applications.
1	21. The computer system of claim 17 wherein said computer system has a plurality
2	of installed print drivers, and said memory further comprises:
3	an auto-learn procedure to automatically identify a plurality of print options of one
4	of the plurality of installed print drivers;
5	instructions to select said one of said plurality of installed print drivers as a test-
6	print driver; and
7	instructions to provide a graphical user interface to set at least one of said plurality
8	of print options to a predetermined value, wherein said instructions that automatically
9	generate generates said driver-test data structure with said associated applications and
0	documents, and include said predetermined value of said at least one of said plurality of

10

- print options, and said test-engine to open said associated applications and documents of
- 12 said driver-test data structure includes instructions to set said at least one of said plurality
- of print options to said predetermined value, thereby testing said test-print driver.
- 1 22. The computer system of claim 17 wherein said memory further comprises:
- 2 instructions to provide a spreadsheet to associate said applications and documents.
- 1 23. The computer system of claim 17, wherein said memory further comprises:
- 2 instructions to print each of said documents.
- 1 24. The computer system of claim 17, wherein said memory further comprises:
- 2 instructions to generate a log while executing said test engine.
